

# Responsibly Green

## WHY BUY GECA CERTIFIED PRODUCTS?

GECA certified products are better for the environment. They do not contain harmful ingredients such as phosphorous, edta and harmful VOC's. These products are biodegradable, come in reduced and preferable packaging, and contribute to lower waste and resource consumption. Additionally, they support sustainability sourced palm oil and palm kernel oil.

In terms of human health, GECA certified products contain fewer harmful chemicals and have minimised VOC (volatile organic compounds) content. They also have restrictions on fragrances and enzymes and do not include known carcinogens, mutagens, or toxins.

Ethically, GECA certified products ensure no unsubstantiated claims are made. They also guarantee fair pay, equal opportunity, and a safe working environment for workers.

## WHAT DOES GECA CERTIFICATION MEAN FOR YOU?

Cleaning products are essential for healthy living and working spaces but can also impact human health and the environment. Issues like skin irritation, asthma, and water pollution from toxic chemicals are common concerns.

GECA certification ensures that a product meets strict environmental, human health, and ethical standards. It simplifies the process of choosing environmentally and socially responsible products.

The standard covers general purpose cleaners, sanitary cleaners, laundry agents, and dishwashing detergents. GECA-certified products also contribute to earning credit points under the Green Building Council of Australia's Green Star Performance tool.
